

**Dr. Friederike Eysel**, Professor and Head of Lab, CITEC Center for Cognitive Interaction Technology, Bielefeld University

**Title Keynote: “A psychological perspective on social human-robot relationships”**

“The presentation will offer a social psychological perspective on relationships between humans and robots: First, we will put a focus on the role of communication between humans and robots. In particular, we will shed light on determinants of people's willingness to share personal information with robots, i.e., self-disclosure. Moreover, we will address psychological determinants of trust in social robots. We do so using an experimental, lab-based approach”
